October 2026 Feature Guide — Part 2

Smart Club Platform · what's new, who it's for, and how each feature works

Everything in this guide is built, reviewed and tested, and goes live with the deployment happening today (8 October 2026). This is a companion to the October 2026 Feature Guide published on 6 October; nothing here repeats that guide. Features are grouped by who uses them.

1. For club captains and chairs (club portal)

1.1 Match scorecards inside the captain's report

After a match, the captain's report in the portal now shows the full official scorecard, pulled in automatically from the match centre: both innings, batting and bowling figures, extras and the result. Each innings can be expanded or collapsed, so the report stays readable on a phone.

The report now includes one required question: **is this scorecard correct?** The captain answers with a single large button:

- **Confirm** — the club signs off the score as recorded.
- **Flag a correction** — the captain says, in their own words, what is wrong (a missing wicket, a wrong bowler, a score out by a few runs). The flag goes to the platform team to resolve.

Each side answers for itself, so the union ends up with both clubs' sign-off on the official score. A report cannot be submitted without answering, which is the point: the score gets checked while the match is still fresh, by the person who was there.

Small touch for the scorers: a batter who retired not out is shown with a star (*), matching scorebook convention.

> *Why this changed: an earlier design sent chairs a Monday digest of the week's scorecards to confirm after the fact. Confirmations now happen inside the report the captain already files, so there is one less email to act on and the answer arrives days sooner. The Monday digest is gone.*

1.2 Fixture reminders now arrive on WhatsApp too

Match-day reminders (introduced in the previous guide) went by email while we waited for Meta to approve the WhatsApp message template. That approval has come through. From this deployment, clubs in a union that has WhatsApp enabled get their fixture reminders on WhatsApp as well as email. Clubs do not need to do anything.

1.3 Transfer notices now carry a direct link

Every transfer (clearance) notification — email and WhatsApp alike — now carries a link straight to the transfer it is about. A club rep who taps the link lands on that exact transfer in their portal; a union admin lands on it in the console. No more reading a notice and then hunting through lists to find the right player.

2. For union administrators (admin console)

2.1 Knockout fixtures that fill themselves in: "Set team"

Knockout fixtures can now be created before anyone knows who is playing in them. A semi-final can list its sides as, say, *Winner of Quarter-final 2* — a named placeholder rather than a club.

- Once the qualifying match is decided, the admin opens the fixture and uses **Set team** to replace the placeholder with the real club.

- The usual safeguards apply before the change is accepted: it is blocked if the chosen club is already playing elsewhere at that time, or if the change would create a fixture clash.
- Picked the wrong club? **Revert** puts the placeholder back.

The Titans T20 knockout rounds are the first competition using this, but it is available to every union.

3. For the platform team (operator portal)

3.1 Weekly fixture amendments by spreadsheet upload

Unions circulate a weekly "Reminder Fixtures" spreadsheet with late changes: new dates, new venues, postponements. Until now those changes were applied by hand. Operators can now upload that workbook directly in the portal:

- The platform reads the sheet and shows a **preview of exactly what would change** — fixture by fixture, old value and new value. Nothing is written at this stage.
- The operator confirms, and only the listed changes are applied. Everything else is left untouched.
- A change that would *introduce a new* fixture clash is blocked and named, so the sheet cannot quietly double-book a ground. (A clash that already existed before the upload does not block unrelated changes, and a postponed fixture no longer counts as clashing — it has no date to clash on.)
- Applied changes flow through to the match centre automatically, so both systems stay in step.

3.2 Scorecard corrections console

When a captain flags a scorecard as wrong (section 1.1), the flag lands in a corrections console in the operator portal. Operators can filter the queue, see the flagged scorecard side by side with the captain's note, and mark it handled once the score is put right. The clubs involved are emailed when their correction is resolved, closing the loop.

3.3 Titans 2026-27 season ready to load

The full Titans fixture list — roughly 1,400 fixtures across 36 competitions, including the T20 knockouts and veterans playoffs — can now be imported by the platform team with the same safety rails as every other import: every fixture is clash-checked, the import previews before it writes, and it can be reverted. This is a behind-the-scenes tool, mentioned here so everyone knows the Titans season can be loaded as soon as the union gives the word.

4. Behind the scenes

Two smaller items in this release, included for completeness:

- **Sport-correct player records.** On football unions, cricket-only profile fields (batting hand, bowling type and so on) can no longer be stored through chair registration. Each union's player records now only ever contain fields that make sense for its sport.
- **Right to be forgotten, extended.** The POPIA player-erasure action introduced in the previous guide now also scrubs the player from stored scorecards.

Where each feature stands

Feature	Status after today's deployment
Scorecard confirmation in captain's report	Live everywhere
Fixture reminders on WhatsApp	Live everywhere
Transfer notice deep links	Live everywhere
Knockout "Set team"	Live everywhere
Fixture amendments upload	Live everywhere
Scorecard corrections console	Live everywhere
Titans season import	Tool ready; import runs when the union confirms

Questions about any of these? Ask in the platform channel and someone will walk you through it.
